

2020 Fungicide tolerant blackleg survey protocols

Contact name.....

Contact phone number

Email.....

Closest town/Locality.....

Paddock GPS (optional).....

Canola variety sown in 2019.....

2019 fungicide applications (please circle all appropriate applications and fill out table for foliar)

No fungicide applied

Jockey (fluquinconazole) applied to the seed

Impact in Furrow applied to the fertiliser (flutriafol)

Foliar fungicide applied (specify Trade name)	Rate	Timing of application(s). e.g. 4-6 leaf, 30% bloom.

Other fungicide, please state what fungicide was applied, rate and timing.

.....

.....

Please collect 30 pieces of stubble for your 2019 canola crop. It is preferable but not critical that stubble pieces be at least 20cm long and contain the root section. Walk 20m in a straight line across the paddock and collect one piece of stubble approximately every 1m.

Post dry stubble in a paper bag and this completed form to:

Marcroft Grains Pathology
Grains Innovation Park
110 Natimuk Rd
Horsham, Vic, 3401

Please note that there are no quarantine restrictions associated with fungicide resistance. Your results will only be published in the form of a low-resolution map. No personal details will be published.
